The Nubal Spacesaver Vilun is the latest variant of one of our most popular models. Either collecting or feeding is carried out reliably, without panels scuffing one another and with only a 12mm margin on one edge being touched by the slats. The difference with this model, however, is the small footprint required to collect full size panels. All usual options are available including standard conveyors, multiple indexing, machine full alarms and interfacing to other machines. Alternative slat depths and widths are possible subject to availability and wheels can be fitted instead of the standard feet.

- Weight – 120 kgs
- Height – Nominal 900 mm (adjustable)
- Width – 660 mm
- Length – 740 mm
- Electrical supply – Single phase 50/60 Hz
- Speed – Variable 0 – 5 m/min
- Maximum panel size – 760 x 760 mm
